## U of T President publically participates in Necro-Bestial Oral Fixation!!!!

by Theresa Robinson  
Ace Reporter

University of Toronto President J. Robert Pritchard has been caught engaging in necro-bestial oral fixation.

The Toike Investigative Team (TIT) obtained this exclusive photo of Pritchard eating the body parts of a dead chicken.

The TIT spoke with world-renowned sex psychologist Dr. Harry Merkin about necrophilia, bestiality and oral fixation.

"Bestiality is the desire to engage in sexual activity with animals. Necrophilia is the preference for a

dead partner. And individuals who are orally fixated insist on putting everything in their mouths, particularly in a sexual setting. Each of these disorders on its own is not uncommon, but all three together is just gross. This guy needs some serious professional help."

However, when the TIT suggested to the president that he seek professional advice on his sexual preferences, he denied that he had a problem and asked the TIT to please pass the plum sauce.

Says Dr. Merkin: "Denial is a sign

## Learning by Osmosis

*U of T researcher may have finally discovered why students' attempts at this promising study method have failed*

by bob J.  
Toike Staff

At first sight, Laura Edwards does not look like the type of academic mind who would be responsible for a scientific breakthrough that may revolutionize the way in which students learn. "It just sort of came to me one day," shrugs the petite blonde who is head of U of T's Council for Research of Alternative Prognostication. "Students eat a lot of salt. And we all know what happens when there is a high concentration of salt: things flow across the membrane to try to balance things out. That is how osmosis works."

But the goal of students trying to learn by osmosis is to absorb knowledge which is so highly concentrated in their textbooks, not to have salt flowing across membranes. This lead to Dr. Edwards' first revelation: Students need to eat

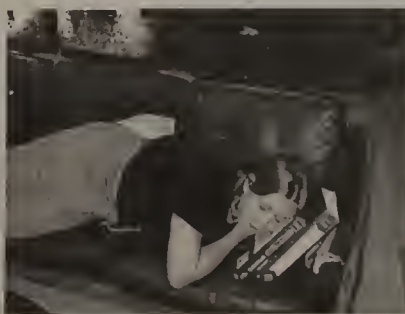

less salt if they are to learn by osmosis.

"It's quite simple, really," explains Edwards, "You decrease your salt intake, and the concentration of salt in your body is less than the concentration of other stuff outside your body. This forces things to flow across the membrane in the direction that will balance things out more. So stuff will flow into you, specifically knowledge into the brain." The additional health benefits of decreasing salt intake — lower blood pressure, for example — are simply an added bonus.

Initial tests using this method were discouraging. "Our test subjects demonstrated little if any absorption of knowledge," laments Edwards. "Then we realized what was

wrong."

In order for osmosis to occur, substances must be dissolved. As a result, the second round of testing involved submerging test subjects

student Laura Edward studies hard for a midterm

and their text books under water. This proved more promising.

"Five per cent of our lab rats demonstrated a definite increase in their ability to integrate after just three

hours under water with the Sallas and Hilles Calculus text," beams Edwards. "And any chem or bio student knows that you can speed up a reaction by increasing the temperature and agitating the solution."

Subsequent tests incorporated this information, and a marked increase in absorption was noted.

"We are still working out the bugs," says Edwards confidently. "We still don't know exactly what happens during this complex process. There is a chance that other knowledge might dissolve into the solution, but we are pretty sure that we can distill that solution and everything will be retained in the text book in the end, so it will all be recoverable."

The Toike Oike makes good on its promise. Turn to page 3 for the Toike Sunshine girl!

## Editorial

### Just like a Varshitty "news" article but we call it an editorial

A few weeks ago, I learned that there was going to be an annual meeting for the Varshitty (a crappy campus newspaper). I knew that around a dollar of my student fees entitled me to a membership in the Varshitty. In what I can only explain as a spur of motivation, I set out to get my dollar's worth of democracy.

I sincerely felt that the official name of the newspaper should reflect the nature of its content, so I researched the newspaper's corporate constitution and with a little help from some friends wrote up an amendment.

I knew that there were a lot of people who would agree with my amendment but I also knew that very few people would be able to make it to the meeting (which was at six o'clock that night). This is where proxies came in.

Proxying is basically one person saying that they cannot make it to a vote so they entitle another person to vote for them. I talked to a lot of people, telling them about the meeting and about my amendment. Not many wanted to come to the meeting but 76 people, some engineers and some artsies, signed proxy forms, trusting that I would pass the amendment and bring democratic justice to the world of journalism.

I thought that it was sad that many

students are not even aware of their ability to vote in such a meeting. Many of the people that I approached about my amendment asked, "will *they* let you do that?" not realizing that the "they" to whom they referred were in fact themselves.

Regardless, I went to the meeting with the proxies of 76 supporters in hand and was surprised to find that the meeting had been scheduled in a room that could fit no more than around twenty people comfortably. There were more than twenty there; twenty-seven people eligible to vote were in the room, many of them people who I had spoken to earlier in the afternoon. I wondered how the meeting could have fairly represented the population had we not shown up.

Democracy does have a device to protect against such problems. It is called quorum. Quorum assures that a vote will only take place if a valid number of voters are present. I was aware that the Varshitty had quorum set at 100 votes. With the 27 people present and my 76 proxies and the proxies of other people in the room, we had around 116 votes present.

The meeting progressed as scheduled on its agenda. Several other motions were passed. When the time came for our motion to be passed, the meeting was stopped

because quorum was called. It seems that the Varshitty's constitution does call for 100 votes to be present but 50 voters must actually be present for a vote to be valid.

This raises some interesting questions. If there were not enough votes present to make a fair decision about my amendment, then how could there have been enough votes present for any of the other votes? If fifty people present are required to make a fair vote, why was the meeting scheduled for such a small room?

I must agree that my amendment was stopped by real rules that are written down on real paper for all to see but what truly upsets me was the behavior of one of the members of the Varshitty. After the meeting, she said "can't you find something constructive to do with your time." I personally think that exercising my democratic right is something constructive. When I was asking the Varshitty editor (a really nice guy even though he works for the Varshitty) about how I could get another meeting where my amendment could be reviewed by a sufficient number of students, she butted in and said "Haha, you lose."

You know what, I don't think that I lost. I realized that I had some pull at this school just because I go here. I informed a lot of people that they had the same rights and in the process over doubled the number of votes at a meeting.

If anyone lost, then it was the group of people who think that they control democracies, the kind of people who hold meetings in small rooms because they don't expect anyone to challenge them. They may have stopped us from passing our amendment but in the end, they must go home knowing that regardless of rules, the majority of votes at the meeting disagreed with them.

I have already been way more serious and political than I wanted to be in this editorial but I assure you that the rest of the Toike is a lot more light-hearted. Have fun, be nice and don't let anyone stop you.

-C.E.O.

### IT'S A SLOW NEWS WEEK THIS WEEK.

## Letters

Dear Editor,

I'm an artsy from St. Mike's, and I want to say that I love your paper. I'd also like to say that if anyone doesn't like this paper, they should have their ass stapled to their nose, because they obviously don't have a sense of humour anyways. I published a paper like this in my high school, and I almost got expelled for it! Anyways, just like your disclaimer says, the paper 'is just a joke', and if people can't understand those simple words, they shouldn't be hanging around UoT.

St. Mike's Student

ps. You're right, the S.M.C. student that wrote the letter last issue probably *does* have something stuck up their ass.

Dear SMC student,

*You wanna know what I'm feeling right now? YOU... kissing my hairy ass! While it is always gratifying to know that the efforts of the Toike Oike staff are appreciated, and as much as I enjoy having my ass kissed (sometimes by two or three people at a time), I simply cannot stand for the sacred text of the toike being compared to some shitty little high school newspaper. Do you think I give a rats fucking ass what the hell you did in high school? I never read the paper you wrote in high school but I'm positive it was no where near toike calibre.*

-Posty

So anyways, I figure if anyone would know where I could get some Tang 'round here, it'd be you.

-Me

*Tang is indeed a tasty beverage. I myself prefer Kool-Aid but I am sure that you can find all the Tang you need at many local convenience and grocery stores*

-Posty

Dear Toike,

Quit freaking emailing me about Toike submission deadlines! Bloody submit this. Your damn messages contain no shitty content and are a waste of my fucking time. I have more important things to do than read your pathetic lousy emails. And learn how to use the idiot Reply-to: field in your stupid emails if you want asshole replies sent to toike@skule.ca. Hello? RFC822, anybody? Have we become a world of useless artsie comp-sci morons? Masturbating Linux weenies or Win95 script kiddies?

-An important, busy, harried, non-reader

*Gee, I don't think that you are that important. Oh, and here is a piece of advice. When you send an email like that, make sure to empty your reply field. Oh and check your in-box, its full.*

-Posty

Why My Flem-Soaked Hand Is Up My Ass

An engineer's workday is a long workday. (No... that is not why I have

my hand up my ass.) And being the long workday that it is, instead of using the one at home, every now and then we are forced to use these wonderful washrooms, here in these wonderful engineering buildings. What am I talking about? - Yep, you guessed it... I'm talking about BM, aka taking a dump. Now, this isn't a pleasant topic, but I think there is an issue of serious concern that needs to be discussed.

Some of us, mostly from experience, may be familiar with this problem. It is the problem of toilet paper. Anyone who's tried so much as to even blow their nose, let alone wipe their ass, knows exactly what I mean: *PAPER SOTHIN YOU CAN SEE THROUGH IT!*

The paper is, in fact, too thin to barely hold itself together when exposed to even the slightest amount of moisture or frictional force. Whenever I try to blow my nose or wipe my ass, it always ruptures or tears apart. I'm sure many of us engineers are familiar with what it's like to try and blow your nose and have all your flem (ie phlegm) go straight into your hand. I'm sure many of us are also familiar with what it's like to try and wipe your ass - and then realize that the paper has dis-integrated, and that you now have your hand half-way up your rectum. It is quite an unpleasant feeling that isn't easily remedied by repeated, and/or thorough washing. I mean, come on, if that's what I wanted, I'd go use an Innis washroom....

Does whoever in high command honestly think that they are saving money? Does he/she honestly think that less paper will be used!? When you need paper to wipe your ass or blow your nose, you don't measure according to length, but to *thickness*. Obviously, someone is missing this concept. The paper is so thin that I sometimes can't even pull it 6 inches without it ripping by itself. Really... who can use 6 inches of *that* paper? I have to throw out at least five feet before I can get one of decent, useable length.

*To whomever is in charge:* Buy some thicker fucking toilet paper! And if you don't believe me, try it - I'm sure the feeling of your hands covered in your own warm residue will convince you enough!

Benjamin Nagy  
Elec0T2

*We at the toike wish that we could help you. We advise using the Varshitty as a TP replacement. Sure its kinda like Clint Eastwood, its rough, its tough, and it doesn't take any shit, but the satisfaction of adding more shit to a shit pile is worth the ass-sores.*

-Posty

Dear Toike editor,  
I am always pleased to see when the most recent edition of your paper comes out. Upon seeing the last edition, and with my normal pleasure, I eagerly grabbed a copy and turned, as usual, to page

number 6. I was tremendously disappointed!

The revised ROSI faq is complete rubbish! Non-answers such as "Next question." to valid Qs are simply not acceptable for a paper of your prestige. Even worse, some answers were entirely misleading (for example, the back button *does* work - ROSI is compatible with Lynx-2.2.8+SSL and it is not ROSI's fault if you insist on browsing with a stupid graphical broken graphical browser).

The waste of paper did not end...

On page 7 your columnist recommended that "Tired of being humped" should have her dog fixed. Imagine having your wee-wee cut! It's clear that this dog has needs that the "Tired" is not fulfilling for him. I suggest she find an appropriate female companion immediately.

Miss Robinson is obviously not aware that all cyborgs worth making sweet maple syrup love to also come with appropriate vibration implants. These hybrid biological-mechanical devices are guaranteed to be far more effective than a purely biological stimulation device...

For those not interested in vibration implants, remote-control inflatable

breast implants (they in/de-flate through small nipple holes) are also available. Do not inflate past 60psi.

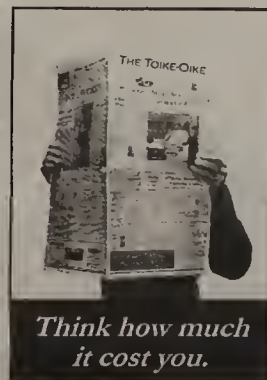

"Alien Sex Scandal" ... we should be proud that UoT has finally crossed the final boundary to unity in diversity, and by an engineer no less. Talk about creating a scandal...

Re: "Fun with STAPLES". Does Bobo McFo have a girl/boy-friend? I'm sure Bobo's talents must come in useful.

-Disappointed Reader

*Wait a second, you sound familiar. But if I really wanted to hear from an ass, I would fart. Dude, its nice to know that you are an avid reader, but you stink.*

-Posty

SUN  
SHINE

Shine Girl

This Month's SUNshine girl. spark69.ecf, is a Sun Sparstation. She has a great baud - --10Mb/s connection built in -- and, with her 19 inch display, has a face to match. Her main turn on is her power switch, and she likes a user who isn't afraid of pushing the wrong buttons once in a while. When she isn't doing exactly what her current user wants, she likes to run recursive processes, or calculate the last digit of pi.

Who Cares

## U of T Prez at the center of latest SEX SCANDAL

that the obsession has really taken root. It's going to be a long hard road to recovery."

To a campus already rocked by bizarre sex scandals, such as the recent involvement of SAC president Matt Lenner with space aliens, this was just another chapter in a long twisted saga.

"You'd think he'd have the decency to fuck live chickens like the rest of us," said one Knox College student. "Instead he eats dead ones? How sick!"

"We're only talking female chickens here, right?" asked a St. Michael's student. "That's ok."

As long as he's not sucking cock or anything. Although really they should get married first."

The University of Toronto chapter of the Society for the Prevention of Cruelty to Animals is demanding that President Pritchard resign. This is unlikely to happen, however, as even SAC is supporting him.

Says SAC president Matt Lenner "Look, if our leaders want to have sex with space aliens and staplers, eat dead chickens, or use the shape of their feces to decide the future of the campus radio station, what business is that of the students?"

This filler wouldn't  
need to be here  
if you had come  
to our monthly meeting

toike@skule.ca

## 10 Steps to Becomming a Highly Effective Engineer

10. Become accustomed to fewer the 4 hours of sleep per day.
9. Problem sets look best when done an hour before they're due.
8. Problem sets look EVEN better when done drunk....
7. Don't hand anything in that was written while drunk....
6. DRINK!! (esp when you write a bad problem set)
5. Don't panic the day before a midterm
4. Save all the panicing for the acctual midterm...
3. listen to Weezer (shamless plug to get into the toike...)
2. Bop an eng sci on the head for good luck AT LEAST once a day\*....
1. Wear clean underwear.... most.of the time .....

\*note: the Toike Oike does not condone nor recommend touching Eng Scis

### One Nightstand,

a new magazine showcasing the literary and artistic talents of engineering students, is looking for submissions. Any original short stories, poems, rants or raves, reviews, photographs, paintings, drawings, scribbles or doodles are welcome. Please send submissions to dave.phillips@utoronto.ca (or e-mail me with any inquiries). The first issue, although somewhat delayed (OK, really LATE), will be coming out shortly - so get your work in soon. Artwork and photographs may also be dropped off in the MECH 4th year box in Eng Soc, with a note attached saying who the artist is, contact info, and "for David Phillips, One Nightstand".

## Your Suds Away From Suds!

**416/59•STEIN • ein•stein cafe & pub • 229 college street**

**For the love of beer...and wings, pool, tunes, sports, games....**

**Time to book your end of term party...dates are closing fast!**

**Now open for Sunday NFL giant screen surround sound games and wing specials!**

Are you a lesbian, gay, bisexual, transsexual, transgendered, or two-spirited engineer, or engineering student? If so, Q-Eng is a social group for you, where you can meet other similar engineers in a relaxed, comfortable setting. It's a great way to meet new friends and contact possible employers. Come join us on the second Wednesday of every month at The Mango, south of Church Street and Bloor Street. The next meetings are on November 10 and December 8, from 7:30 to 11:00 PM (just ask the staff for our table). For more information, check the community group listings in Xtra, Fab, or Siren Magazine, or call us at (416) 385-2658.

## ROSI SUCKS!

Check out a real  
web page @  
[www.toike.skule.ca](http://www.toike.skule.ca)

Its the exact same stuff that you  
see on newsprint, but its on the  
web. Email and ICQ this ad-  
dress to your friends to show  
them what a real skule  
newspaper looks like  
[www.toike.skule.ca](http://www.toike.skule.ca)

anybody who wants to help with the  
toike oike or toike-on-line should come  
to our meeting on November 17 at  
8:00pm in Eng Soc

## WELCOME TO ROSI Repository of Supreme Incompetence

### Suggestions for Improvement of ROSI (without increasing our tuition fees)

Mark Jaggassar  
COMP 0T2

More of those great grey buttons on  
web site. (of uneven length, of  
course.)

A self-help chat on the ROSI web  
site, so that students can vent their  
anger seek consultation.

More pictures of ROSI circulated (and  
on that web site), so that students  
have a clearer picture of who to hunt.  
(Hint: look for walking condom.)

AIR MILES®!!!

A ballot system, whereby millions of  
tiny pieces of paper, with course  
names written on them, are put into a  
big arena on front campus where stu-  
dents fight for their courses in a cam-  
pus wide battle to the death. (Too bad  
for Eng Sci's.)

Several inflatable ROSI dummies posted  
around campus to act as Student Stress  
Relief Units (punching bags.)

Hire the Varsity staff to run ROSI, of  
course this won't improve anything, but  
they could keep it running (very badly)  
for at least 118 years... (Of course, they  
would have to rename it to: Non-Gen-  
der-Specific Repository for Educated  
People's Financial and Academic Infor-  
mation.)

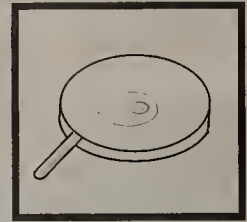

Upgrade ROSI from the old "penta-bug"  
computer it's been using.

Hire those "million monkeys" (from those BEVER-  
age commercials) to replace ROSI. (I'm al-  
most positive that this will increase the  
productivity of the system tenfold.)

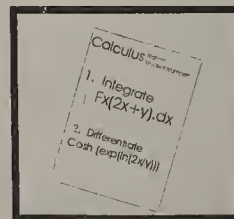

A campus-wide scavenger hunt to find  
ROSI, dead or alive, in order to finally  
end our abuse.

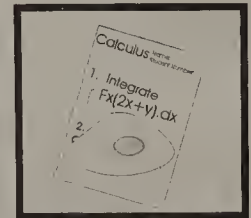

This is Your Brain

This is Your Brain  
on Drugs!

This is Your Midterm

This is Your Midterm  
on Drugs!

This is ROSI

This is ROSI on Drugs!

## The Sex Column with Joe Suehanssen

Dear Joe,  
I'm a 20 year old female. Lately I have been having problems trying to pick up guys. I don't understand what is going on. I'm not sure if it has something to do with the fact that I'm a stupid bitch, that's why I dropped out of engineering. I am really really stupid, and I wear too much perfume, but I thought guys liked stupid girls. Please help me out.  
-Julie

Well Julie, wearing too much perfume will tell guys that you probably smell very bad and are trying to cover up the smell. Most good looking people drop out of engineering, but I don't understand why you dropped out considering you're ugly! You have no hope in the world, I recommend that you should resort to masturbation, and using dildos and vibrators for the rest of your life.  
-Joe

Dear Joe,  
I'm a smart, intelligent gorgeous chem eng. Student, who is not a stupid bitch! I have a problem that relates to industrial engineering. Lately, I have been using various fruits and vegetables as dildos, such as bananas, cucumbers, etc... I have been contemplating buying a dildo, but I have had bad decision making skills. I have been trying to compare the cost vs. usability of dildos vs. fruits and vegetables. I like vegetables because they always come in different sizes, however, I can't afford to be spending all my money on fruits and vegetables. Can you please help me out in my decision to buy a dildo or not?  
-Need to conserve money because of \$700 tuition increase.

That is a good question and I'm glad you asked me. You can buy really high quality dildos for about \$20, assuming that Cucumbers cost 3 for a dollar. If you use your dildos more than 60 times, you will be saving money. So the question you need to ask yourself, how many times would you use your dildos, if it is less than 60, I would recommend your continued use with the fruits and vegetables. However, if you plan to use the dildo more than 60 times, it would be more economical to buy a dildo. If you ever get bored of the dildos, you can always resort back to fruits and vegetables for variety. If you want, you could use fruits and vegetables as dildos, and sell them on the internet, there are a lot of sickos out there who would pay premium dollar for your used fruits and vegetables.  
-Joe.

## How NOT to Extract Xstasy from Flintstone Vitamins

By: Captain Codéine

*It has come to the attention of the Toike Oike staff that the powerful narcotic known as Xstasy (or simply "e") is present in trace amounts in the popular Flintstone line of Vitamins. As a public service, we provide these steps to avoid accidentally extracting this narcotic.*

1. Do not purchase Flintstone Vitamins
2. Do not set aside exactly 13 Flintstone Vitamins.
3. Do not obtain the following:
  - 1 Coffee Cup
  - 1 Coffee filter
  - 1 Spoon
  - 1 Kettle
  - water
  - 1 glass cup
  - 1 elastic band
4. Once you do not have the following items, do not proceed:
5. Avoid at all costs, heating the water with the kettle
6. Please do not measure 40ml of water and pour it into the coffee cup.
7. Once the water is not in the coffee cup, do not proceed to place all 13 pills inside the coffee cup
8. Do not stir the water and pills with the spoon for about a minute until the pills are completely dissolved in the water
9. Don't place the coffee cup in the fridge for about 30 minutes, stirring the mixture every 10 minutes or so.
10. Once you haven't done

that... don't put the coffee filter around the glass cup, and place the elastic band around the top of the cup so the filter does not fall into the cup.

11. After the 30 minutes, do not pour the contents from the coffee cup and into the glass cup so that the mixture goes through the filter.
12. Do not place the glass cup in the fridge for 15 minutes until most of the liquid is at the bottom of the glass cup.
13. Throw away the filter with the leftover goop.
14. If you did not follow the proper procedures, then you should not be left with a clear liquid in the bottom of the glass cup.

Once you have failed to perform steps 1 through 14, do not drink the liquid in the glass cup and you won't get high on "E".

## The Joy of Extra-Credit Sex

by bob J.

*Second in a series of "Joy of Sex" articles, brought to you by the Toike in interest of engineers getting laid, cuz it doesn't happen nearly often enough.*

We have all been there at some point in our academic careers: try as you might (or not), your marks just aren't what you'd like them to be. Whether you're a few percent short of passing that class, clearing probation, not having to repeat yet another term, staying in Eng Sci, making honours, keeping your parents happy, or getting your overall average to be a perfect 69.69%, there seems to be only one thing for you to do: Figure out who you have to sleep with to get that extra credit you need.

Some might find it degrading prostituting themselves for marks. Sure, it might leave a bad taste in your mouth (see tip # 5) to think that you have to degrade yourself for grades. But just like copying problem sets and writing crib notes on exam pencils, every engineering student has to get used to it in order to make it to Iron Ring. Here are a few handy (see tip # 5, again) hints that we have put together to help you get the marks that you so greatly deserve.

### 1. Research the power structure of your course

The last thing you want to do is go down on someone unnecessarily. Make sure that the authority figure you're boning (or who is boning you) actually has some control over your marks. If you end up sleeping with someone who

only presents the lectures of tutorials, but has no influence on your marks, well, you're screwed, aren't you?

### 2. You can't wait for them to ask

Although your Profs and TA's look like they're desperate and haven't seen any genitals since they were born, there are tens of other below-average students in your class who are in your position. You have to make it quite clear that your intentions are to perform sexual favours in exchange for a mark upgrade. It may be an awkward thing to bring up. Make it easier on both of you by ensuring that no one else is around when you proposition your TA/Prof. And don't forget to state right out what you are petitioning, and the action you would like him/her to take to improve your academic standing.

### 3. Be prepared

Everyone knows that TA's and professors earn next to nothing. For this reason, you shouldn't assume that their offices would be stocked with the necessary supplies. Make sure you bring your own condoms, rubber gloves, KY, kneepads, handcuffs\*, and post-coital cigarettes and lighter. They will appreciate the fact that, just this once, you did your "lab prep".

(\* These authority figures prefer to feel in control. Make sure that all restraints are used on \*you\*!)

### 4. Be discreet

As much as you may want to ensure your partner of his/her prowess, it is seldom a good idea to be very vocal during the performance. The cubical walls in grad offices are not acoustically advantageous. And professors tend to enjoy maintaining their tenure. Keep the volume to a sufficiently low level that a minimal number of your partner's colleagues witness their indiscretion.

### 5. Oral sex is worth mega marks!

While it takes a bit of practice to get to the "ohmygodohmygodohmygod" level of talent, it's much easier to please with cumlingus or felatio than with the good old missionary position. For good results, find whichever of the following applies to your subject: the frenulum, circumcision scar, clitoris, &/or G-spot. Don't be afraid to get your hands involved. And always use a condom: you never know who else has been sucking off your profs. (The mint flavoured variety are preferable because they freshen your breath while you suck.)

### 6. Provide friendly reminders

Never assume that your TA or Prof will remember to augment your marks on his/her own. It may be to your benefit to take a few pictures or videos to remind the person in question (and his/her superiors, if necessary) what exactly you did together, and what marks were agreed upon in exchange.

Upon reading the Toike Oike, her Majesty The Queen punnished PM Jean Cretien for nose picking with a severe Toiking

Angerred and distraught, the PM ambushed the Toike CEO during one of their discussions about the future of the nation

In true manegerial style, the Toike editor passed on the furry to his underling, the Toike Sr. VP

# Toiking Fallout

Skywalker was consoled by his love interest/sister Princess Leia. Don't you just love stories with happy endings

Piccard took the Toike to a gallaxy far far away and toiked a Jedi knight

The alien retaliated to phaser fire with a big ol' toiking right on the Cap'n's bald noggin.

Lenner passed the Toiking on to his X-lover after finding out that the alien had been sleeping with last year's Toike Editor Desmond Clivio.

**NO PHOTO AVAILABLE**

(You try getting a good picture of someone dressed entirely in black with newsprint ink all over their face)

In a display of "kick the dog" anger management, the Sr. VP went home and Toiked her S&M slave, SAC Prez Matt Lenner. •
